Foreword

Welcome to Closeburn, Home of the Lammerlaw Romney Stud. We are delighted to see you at our ram sale.

We are proud to present our Lammerlaw Romney and Romdale stud rams.

The ram breeding programme has been running since 1982 and we regularly purchase top rams to add value to our genetics.

Our breeding objective is to produce a sheep that is structurally sound with good growth rates and meat yield; top quality wool with an open face; fertile, with the capacity to hold and rear lambs and a sheep that is cleaner and less affected by worm burden.

Our Romneys are SIL recorded, these results are used as a culling tool only. We are not solely focussed on high index sheep but are more interested in the commercial traits that will help our clients improve their flock with animals that will excel under commercial pressure.

Our stud ewes are run with our commercial flock except for mating and lambing for recording purposes. With our sheep being run under commercial conditions and with our current culling policy we aim to produce a sheep that will do well in all conditions and produce offspring that can perform.

Selection has always been made on phenotype and actual performance data with our main focus on Liveweight Gain in young animals, wool weight and sampling quality, internal parasite management through FEC and Carla, eye muscle scanning and Viascan, fertility and mothering ability.

Please contact us at any time if you have any queries.

Many Thanks for coming today,

Eric and Lynsey

Conditions of sale

1. This sale will be conducted under the New Zealand Stock & Station Agents Association Conditions of Sale. When proceeds are credited or a purchase is debited to a Hazlett or RLL account the companies terms and conditions apply to the extent deemed relevant. These terms can be inspected at the registration desk and on the wall in the auction room. The current versions of Hazlett and RLLS terms and conditions are also available on their websites.

www.hazlett.nz/content/uploads/2021/07/Terms-of-Trade-Hazlett.pdf

www.rurallivestock.co.nz/assets/Uploads/RLL-TERMS-OF-TRADE-July-2017.pdf

2. Each lot shall become the property of the purchaser at the fall of the hammer.
3. Finance terms are strictly cash prior to delivery unless credit arrangements have been made with the Auctioneer prior to the sale.
4. The entry of rams in this catalogue constitutes a guarantee of fertility. Any disputes shall be settled by an Arbitrator appointed by the Auctioneer.
5. Although all care has been taken to ensure the accuracy of the information contained in this catalogue, no responsibility is accepted for any error or omission.
6. The Sale will be conducted exclusive of GST.
7. A 6% rebate commission will be paid to outside companies introducing buyers to the selling company at least 24 hours prior to the sale.
8. **Transport:** Leave full and explicit instructions in regard to transport
9. **Insurance:** The Selling Agents can arrange insurance on any stock.
10. Upset Price: Romney \$800 at auction
11. If a transfer is required the transfer price will be \$2,500.

Overseas Export

12. Prior to auction - Purchasers who wish to export the animal/s ("Export Purchasers") must advise the auctioneers at least 2 hours prior to the sale commencing that they are considering purchasing specific breeds at the auction. The Auctioneers will then advise all vendors of relevant breeds that their animals are being considered for export. Vendors not wishing to have their animals considered for export are to advise the Auctioneers.
13. Purchase at auction by Export Purchasers is conditional upon the animal/s purchased passing all relevant export protocol and testing (conducted at the Export Purchaser's expense). Full payment (plus GST) will be made at the fall of the hammer to the Auctioneers as per usual terms and conditions. Payment will be held by the Auctioneers until the animal/s leave New Zealand. Payment will be refunded to the Export Purchasers less all associated export costs for any animal/s purchased failing export protocol and testing.

ALL RAMS ARE VET TESTED AND ACCREDITED BRUCELLOSIS FREE

OSH Every effort will be taken by the Vendors, Rural livestock Ltd, Hazlett, their staff and assistants, both on the sale day as well as any visits of inspection to ensure the safety of intending buyers and visitors. We wish however to advise that while this sale is run under normal management conditions, certain dangers exist in relation to livestock and their environment. Visitors should take care to ensure their personal safety.

Understanding Catalogue Information

Internal Parasite Management

While we are committed to improving animal health regarding worm burden, we also target dags by dag scoring and culling repeat offenders and/or family lines. We don't enjoy dagging! We dag score the ewes at tupping and the lambs at weaning and eye muscle scanning.

We Carla test the ram and ewe hoggets. The CARLA® test measures the ability of the sheep to respond to larval parasite challenge. Animals with elevated levels of CARLA ® antibodies have 20 – 30% lower FEC are up to 1.5kg heavier than non-responders. We also FEC test to see the need for drenching.

Eye Muscle Scanning and Viascan

We cull out the bottom percentage on poor EMS results. We will continue to select some ram hoggets to go through the Viascan as we believe this can be a very useful tool in selecting sires.

Wool

We are very proud of our wool and believe that its time will come again. Already we are seeing some shift in the world as it begins to understand the benefits of wool compared to synthetic options. We have been using our own fleece wool to make and sell carpet which has been an interesting exercise. It's a great feeling to know that the wool from our sheep is gracing the floors of other people's homes.

Previously we mid-side sampled all our stud ewes and culled the animals with the highest coarse edge micron. We will continue to sample our incoming 2ths with a view to using the data for selective breeding. We focus on CEM as this helps with handle and softness of the fleece regardless of the fleece micron.

Mothering Ability

We grade the ewes at lambing time when we tag the lambs at birth, with a 7 being the best, working our way down to a 1 which is then culled. We also record any ewes that do not raise their lambs through to weaning. We have recently introduced a system to show which weight range her lambs are weaned into and plan to use this when selecting whether to keep her in the stud.

Eye Muscle Scanning Date

24th April 2024

Micron, CEM testing

26th August 2023

Tested as hogget

Liveweight Dates

Weaning weights January 2024

LW7 April 2024
12 month October 2024

Shearing

Rams are shorn as lambs in January and then again in August giving us the fleece weight data (FW11).

Estimated Breeding Values and Indexes

Estimated Breeding Values and indexes indicate the value of a ram as a parent. An gBV is an estimate of the breeding value of an animal as a parent for a particular characteristic or trait. This means the BV represents the worth the animal can actually pass on to its progeny. BVs are displayed in the units they are measured in, eg kg for weight. Generally, a more positive gBV is more favourable. They allow a comparison between rams for particular traits.

EXPLANATIONS OF SIL DATA TERMS	
MW+W+M	Maternal Worth + Wool + Meat BV This includes reproduction, lamb growth, adult size, wool, meat yield and survival
MW+W+M Rank	Ranked out of animals weaned
WWT gBV	Weaning weight
DPG	Dual Purpose Lamb Growth
EMP	Eye muscle product
DPS	Dual Purpose Survival

Understanding Sil Information

SIL (Sheep Improvement Ltd) is the New Zealand sheep industry's performance recording and genetic evaluation database. SIL estimated breeding value (eBV) and selection index information is provided in some sale catalogue listings. These assist ram selection by giving the best estimate of genetic merit available.

Breeding values

Breeding values (BVs) are the best estimate of the animal's genetic merit for traits. They allow rams to be compared, with all rams included in the same analysis. Mostly, this means all rams from the same flock, but it can be used to compare animals from different flocks, if the analysis has been performed across these flocks.

Breeding values are expressed in the units the traits are measured. For example, weight traits are in kilograms.

Indexes

An index provides a summary of overall economic breeding merit of animals. The economic value of each trait is summed to give a total economic value of the ram's genetics. The economic value of a trait depends on the production system; therefore a number of indexes are used to describe different systems. For example, the terminal sire index (NZTW) describes a system where all progeny are slaughtered.

All SIL indexes are expressed as cents per ewe lambing.

Interpretation

BVs and indexes are a function of the population in which they are calculated. In most cases, they are only comparable within a single flock. Although across-flock analysis can allow values to be compared between several flocks, provided there are good genetic connections between the flocks.

It is not possible to compare the genetic merit of rams from different flocks, unless the flocks have conducted an across-flock analysis and there are good connections between the flocks.

For every analysis, SIL sets 1995 as the benchmark year and the average genetic merit of lambs born in 1995 is set to zero. Therefore, the BVs are a measure of the merit of a ram compared to the 1995 average for that flock. If two flocks had different average genetic merit in 1995, the BVs would have to be adjusted for the difference to make them comparable.

CarLA: Boosting Immune Defense Against Gastrointestinal Parasites

The CarLA Saliva Test has been developed by AgResearch scientists as a powerful new tool for selecting sheep with greater immunity to internal parasites.

Host Resistance is the ability of an animal to reduce parasite burden and it is driven by the animal's immune system. Host resistance or acquired immunity to gastrointestinal parasites generally results in 5 outcomes:

- Reduced worm fecundity
- Smaller adult worms
- Expulsion of adult worm burden
- Prevention of larval establishment
- Reduced egg to L3 development success (L3 is the infective stage of gastrointestinal parasites)

CarLA Saliva test

This measures antibody response to a molecule found on the infective stage (L3) of gastrointestinal parasites. This antibody response has been shown to prevent larvae establishing in sheep. This too is an indicator trait for worm burden i.e., the higher the CARLA antibody response the less larvae can establish, thus fewer adult worms and lower FEC.

CarLA antibodies neutralise larval infection, thereby limiting worm numbers early in the challenge process and permitting earlier induction of immunity as well as reducing parasitic effects on production.
